DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 25-46 are rejected under 35 U.S.C. 102(a) as being anticipated by Miyazaki et al. (6,608,903).

Miyazaki et al. disclose a system for modeling a sound field produced by a sound source that generates a radiating sound field that comprises predetermined parameters (figure 1), the system comprising: N transducers (MCi- MCn), arranged to at least partially surround the sound source (Sr), for capturing the sound field and generating N signals that correspond to the captured sound field (figure 1); means (42) for modeling the sound field based on at least some of the N signals, including selected ones of the predetermined parameters', and means-for selectively modifying one or more parameters of selected ones of the N signals to produce a modified sound field (via speakers SP1-SPm). Miyazaki et al. further disclose driver means for receiving N signals corresponding to the modified sound field and driving a reproduction of the modified sound field (figure 1). Miyazaki et al. disclose a driver means is operable to selectively modify one or more parameters of selected ones of the N signals that correspond to the modified sound field (figure 5). Miyazaki et al. disclose storing means (40) for storing the modeled sound field and storing means (40) for storing the modified sound field means.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
